Users of this list should also be aware that a list of Radioactive Waste Brokers exists in the Commercial Services Directory. That list is for facilities which dispose of radioactive materials, but they often are aware of opportunities for reuse or recycle of radioactive sources and should be consulted if you cannot find a desired service in this list. The facilities in this list may or may not dispose of radioactive sources depending on the authorized uses listed in their radioactive materials licenses.

All listed materials					

1) The DOE Off-Site Recovery Project requests owners to register all radioactive sources, noting whether in use or unwanted. Sources may be registered at https://osrp.lanl.gov/PickUpSources.aspx

2) For additional information regarding a specific material, device or manufacturer, contact Michael Snee 502-545-6679, msnee@crcpd.org.

3) US Department of Transportation regulations require that a a shipper qualified to classify, package and appropriately describe a radioactive material perform these tasks for any shipment of a radioactive material. Radioactive waste brokers are qualified to perform these tasks. A list of brokers is given on the CRCPD's home page https://crcpd.org/document/radioactive-waste-broker-decontamination-services/

4) When requesting assistance or other service regarding the disposition of radioactive material, please provide by e-mail or fax the nuclide, activity, date of assay, type of material or device, manufacturer, model number, serial number if available, and whether or not the radiation source is special form.

5) Seeking information on the availability of Ra-226 for production of short-lived, alpha emitting radionuclides for use in cancer therapy. Not currently licensed.
